

Funnel Doctor: why shoppers don't pay, and will a new checkout help?

Simulated online shopping app, 100,000 users (synthetic data).

3.2%

Visitors who pay

48.5%

Quit at checkout

4.3

New checkout lift (points)

Where users drop off (100,000 visits)

Checkout-to-payment rate by device (%)

Payment rate: old vs new checkout

Recommendation

Roll out the new checkout, starting with mobile.

- New checkout raised payment from 51.7% to 56.0% (+4.3 points, 95% CI 1.8 to 6.8, $p = 0.0008$).
- Mobile gains the most (+5.1 points, significant) and has the weakest checkout, at 42.5% vs 65.7% on desktop.
- Desktop (+2.6) and the small tablet/Unknown groups did not show a significant gain.
- Next: investigate the biggest drop, view product → add to cart (74.6% lost).

Note: *synthetic data with a built-in effect, so this shows the method, not a real-world result.*
